

Control Every Aspect of Your Jury Process

Enterprise Jury Manager is an easy-to-use, comprehensive system designed to handle every aspect of your jury process in a single platform. Our innovative jury management system delivers an all-in-one platform to run your jury process including customized configurations to meet your court's specific business rules, robust statistical and financial reporting, integrated features, and more.

SOLUTION FEATURES

End-to-End Jury Management

Enterprise Jury Manager enables you and your court staff to:

- Select random pools of prospective jurors and randomly add to those pools at any time
- Manage source lists, including real-time National Change of Address (NCOA) updates
- Excuse, disqualify, defer, or postpone jurors
- Reassign jurors to a different/new pool or transfer jurors to another location
- Randomly create — and add to — panels for voir dire
- Escalate failure-to-appear (FTA) processes
- Return challenged/unused panel members to the pool with or without barcode reader
- Empanel jury by pool, group, or panel
- Conclude cases

User-Side Configuration

Enterprise Jury Manager can be set up with role-based and page-level security, user-defined lookup tables (location specific), and system parameters. It also supports two-step or one-step processing in the same version and statewide deployments, while also being able to separate grand juries, special pools, and other jurisdictions.

Enhanced Juror Communication

Enterprise Jury Manager can communicate with jurors via email, text, voice, and letter. The system tries every method available to inform jurors of anything service-related.

Data Capture

Capture and keep a wide array of case information along with personal and demographic information for jurors. You can also maintain an extensive history of juror activity, including attaching images and documents to a juror's record to streamline file management.

Attendance and Payment Options

Enterprise Jury Manager enables numerous juror attendance and payment options including:

- Attendance with or without barcode readers
- Multiple payment options (by location) including half-day payments, payments for jurors serving more than a certain number of days, grand jury fees, and exclusions for government employees
- Payments of expenses such as mileage
- Accounting for donations of juror fees and expenses
- Capturing jury trial costs
- "Effective dates" for payment values to accommodate changes in rates
- Printing certificates of service
- Paying jurors digitally, giving them the choice of how to manage their funds

...continued on back

Barcode Technology

QuickSearch in Enterprise Jury Manager makes it easy to look up and process juror records. QuickScan performs several commonly used barcode reader functions. You can also handle mass entry of questionnaire/summons information and perform juror attendance duties more efficiently.

Standard and Customized Reporting

A wide array of pre-defined statistical and financial reports to help your court's operation. This includes data on attendance, summonses, juror yield, juror utilization, juror payments, and much more.

Cost-Saving Automation

Our integrated print service automatically sends summonses for you while cutting down on undeliverable addresses. You can also automatically generate letters or postcards confirming or denying requests for excuses, disqualifications, deferrals, or postponements.

In-House Development

Enterprise Jury Manager, the core jury management system, along with its add-on features and peripheral products have been developed in-house at Tyler Technologies to ensure the tightest integration possible. No third-party products are repurposed for jury management.

KEY BENEFITS

- **Modern Development** – A single code line, robust continuous integration and delivery, and automated test suites ensure quality and quick delivery of new features and fixes.
- **Hardware Independence** – Created as a responsive web-based application, users can seamlessly switch between a tablet, PC, or Apple® device. It's also built on the Microsoft® .NET framework, a technology that enables hardware independence.

- **Easy to Use** – The app's user-friendly design, featuring an intuitive calendar view and integrated side navigation, allows for a seamless user experience.
- **Customizable** – Easy set-up options allow users to focus on the functionality they need. Don't need or use certain features? Turn them off.
- **Integrations** – Tight integration with add-on features — including Summons, Response, Voice, Text Message, and Disbursements — delivers end-to-end jury management.
- **One Code Line** – Hardware independence and personalization features allow us to maintain a single version of the software for clients, regardless of any unique requirements. With one code line, there are fewer bugs and a better user experience.
- **API-Based** – Enterprise Jury Manager is built around a central API that allows for easy integration with third parties, both now and in the future.
- **Multi-Location Access** – Users are able to define whether they want to create and consume data just from their location or from multiple locations.
- **Cloud Native, SaaS Environment** – As a hosted cloud application, you'll always have the best in ease of use, scalability, and security.
