

Electronic Monitoring

USE A RELIABLE, INTUITIVE ELECTRONIC MONITORING SOLUTION

When your department leverages Tyler's electronic monitoring solution for clients, you'll combine full-scale monitoring software, dependable hardware, and comprehensive support services to help increase client compliance, reduce recidivism, and maintain public safety.

READY TO WORK WITH YOUR CASE MANAGEMENT SYSTEM

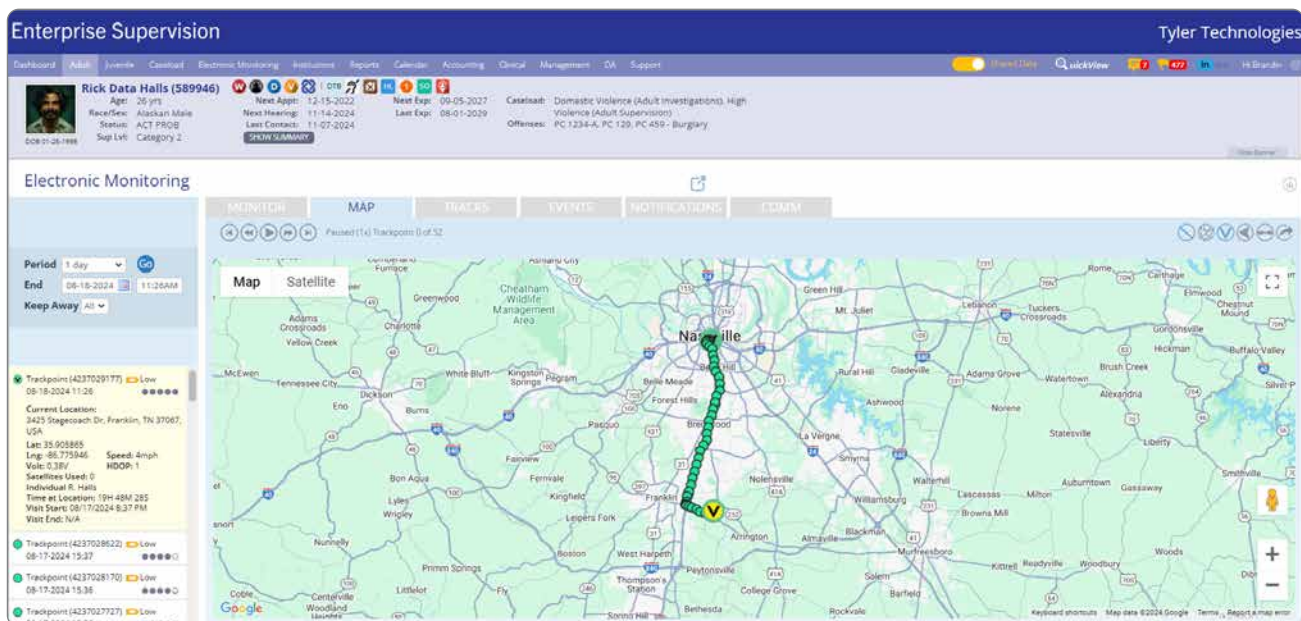

Whether you use Tyler's Enterprise Supervision case management system (CMS) or a different CMS, our electronic monitoring solution is system and hardware agnostic. This means officers can monitor client condition, location, and device data, regardless of changes in device or risk level. If you do have Enterprise Supervision, electronic monitoring is fully integrated into the case management system, so status updates, including biometric check-ins, happen automatically without any additional data entry.

TAILORED TO FIT THE ELECTRONIC MONITORING CONTINUUM

With options for curfew, app-based, and ankle bracelet monitoring, agencies can customize the electronic monitoring approach based on the client's risk level. This allows clients to seamlessly move throughout the monitoring spectrum as their needs or circumstances change, all without disrupting the supervision continuum. This progressive approach is designed to support positive reentry and outcomes within a single CMS.

- Get the hardware, software, and support you need to easily and reliably monitor your clients and help ensure compliance.
- Whether you have Enterprise Supervision or another case management system, you can use our electronic monitoring solution for your clients — pretrial, adult and juvenile probation, and parole.
- Multiple GPS devices are compatible with our monitoring system, so you can find the right device(s) to fit both department and client needs.

...continued on back

You can observe the status of a client's electronic monitoring device and see a history of where they've been on one screen.

EASILY CREATE POLICIES, ZONES, AND ALERTS

If clients try to jam or shield the GPS signal, or travel outside predetermined zones, alerts via automated text, email, and phone call can come directly to you. These notifications also provide supervising agents with court-admissible evidence of tampering.

USE A VARIETY OF GPS TRACKING HARDWARE

Along with our electronic monitoring software, Tyler offers multiple GPS device options, including GEOSATIS®, TrackGroup, and SCRAM Systems®, providing you with the flexibility to switch tracking devices all within a single electronic monitoring solution.

When you switch devices, the software will have all the same parameters, zones, and policies that were set up in the previous device – instead of setting up new hardware to pair with a new software solution — saving you time and costs while also further streamlining your supervision process.

DEDICATED MONITORING CENTER TO SUPPORT YOU

Along with hardware and software, there's also a dedicated call center available for electronic monitoring assistance. The call center can assist with:

- Device activation/deactivation
- Relaying offender location information to officers in the field
- Calling or texting offenders when they are in violation while also notifying the officer
- Adding brief notes into the system for violations
- Clearing violation alerts for officers
- Troubleshooting electronic monitoring issues
